Miki Lombardi

A passion driven developer, open source lover

Since 2014 I have lent my expertise in the software development and solution architect fields. I helped Aperion and Plansoft to deliver high quality products, software and services to their customers. My core knowledge has been instrumental in resolving complex architectural and software development challenges.

Working within the scopes of a lot of technical roles such as software engineer, course trainer, tech lead, solutions architect and head of R&D, I have developed a precise understanding of various technicalities which has helped me in maximizing value of my company and products in my current leadership roles.

My colleagues know me as an excellent communicator. I like to use an interactive approach for understanding and solving problems of varied scopes. I'm also enjoying sharing the knowledge with the community by writing articles and build / contribute to open source projects.

What am I looking for

Always striving to improve, I love learning new things and face challenging problems.

I love to follow a mentor and I like to be a mentor for others too.

In my experience I have always found a friendly and homely environment, even in large companies. I like to always give a touch of style to work, especially with the people who are part of it.

I'm always looking for the next challenge and I would like to be part of the solution process.

Work experience

Jun 2021 - Present

Full Stack Engineer

Growens Marketing Technology

I'm innovating the Software Development process and the technology stack with a look also on the design and acquisition process.
